Sheridan blue streak air rifle repair kit

This seal kit contains the seals to repair any Sheridan Blue Streak or Silver Streak. Sheridan Streak air guns contain all required parts needed to reseal this airgun, plus exploded drawing and tube of oil. Optional Valve Tool helps to remove the valve guide without damage. Optional Bolt Lug Tool helps to remove bolt lugs to replace the bolt o-ring. Beware of lesser quality seal kits! Our seal kits are guaranteed to work. If you cannot repair your airgun yourself you can send it to our Authorized airgun repair center for repair, and we'll deduct the cost of the seal kit from your repair. Proof of purchase is required, so keep your order number handy. Kit includes all required parts needed to reseal your airgun plus a tube of oil, and exploded drawing. This is not a cheap "O-Ring" kit. It's a seal / re-seal kit made with parts closely resembling the originals needed to actually reseal your airgun to restore power. If your airgun leaks CO2, air, or isn't shooting as hard as it should our reseal kits will get them shooting good again when properly installed. Jan 29, 2019#12019-01-29T21:01:11 couldn't resist buying a "spares or repair" Blue Streak. Mostly because I have a Sheridan repair kit that was in my toolbox and wanted to be used. It was fun to service. It's straightforward enough, with help from excellent Youtube videos from Northwest Airguns (guided me through my BSA Superten repair too) and a good repair manual by UJ Backus. There is something satisfying about giving a rusty old leaky disregarded gun a new chance. This one produces 10.5 ft/lbs with 8 pumps. I like it most with 2 pumps - I'm lazy and it's plenty for target practice up to about 30 yards, plus plinking. 8 pumps for anger management, generally after work. Just kidding. I find that I prefer well used guns that I've given some TLC, over immaculate examples that I don't need to / dare to open up? Just more character and story? Cheaper too. Thanks to DT Fletcher for the manual. And the "before" photo R.Belmont, RebelDawg, DT Fletcher like this post1,5956842 Jan 29, 2019#22019-01-29T21:12:12 That's a transformation! Good work, love it when you show all the parts laid out. louisvanhovell likes this post1 person likes this post Jan 29, 2019#32019-01-29T21:14:45 flint wrote: That's a transformation! Good work, love it when you show all the parts laid out. I'm a bit of an exploded-parts-view-photo fetishist hahaha Jan 30, 2019#42019-01-30T00:01:01 Just to toss in a thought or two. First: the standard Sheridan exhaust valve body (as pictured) is designed to make assembly easy; which is why there is a groove (ring) for the air to escape to the barrel instead of a port. This design is great for repair, since it's impossible to improperly align the body; however, this increases the air volume which reduces the power output. Better is the Benjamin exhaust body which has just the port. Note: the Benjamin and Sheridan exhaust body are completely interchangeable. At Ollie Damon's, they only installed the Sheridan bodies in all Sheridan and Benjamin guns as standard procedure. I'd suggest taking a look at the MAC-1 web site for their "steroid" mods for the Sheridan. They also have an upgraded stainless exhaust valve spring that is highly recommended. These improvements will only go to make the Sheridan a better and more reliable shooter. With some work, you might be able to get your Sheridan to work well in the garden with a single pump. louisvanhovell likes this post1 person likes this post Jan 30, 2019#52019-01-30T01:22:22 Nice work on your Sheridan. I have a soft spot for Sheridans as my 1959 model has been with me since early adolescence. I am curious about the output yours is generating with 8 pumps. I believe 10.5 ft lbs. translates into 575fps. Is this the norm for vintage models in top condition? louisvanhovell likes this post1 person likes this post Jan 30, 2019#62019-01-30T12:35:35 Inmeister wrote: Nice work on your Sheridan. I believe 10.5 ft lbs. translates into 575fps. Is this the norm for vintage models in top condition? Hi, thank you. A 1959 Sheridan that you own since early adolescence - very nice! That's definitely a "keeper". It's doing 590 ft/s with 13.73 JSB Exact. I will test velocities with different numbers of pumps. That's interesting. A great design, the exhaust valve body with groove instead of port. I was looking at the groove and the 4 holes the other day, and didn't understand that this was the idea. Smart. But a bit inefficient as you say. I'll have a look at the MAC-1 website. Using the gun with a single pump sounds good. Jan 30, 2019#82019-01-30T13:36:36 I have a '62 model 312 Benjamin with a single exhaust port. Doesn't shoot nearly as hard as my Sheridans. Some other variable at play, I suppose. There are a lot of possible variables. One of the most common is how efficient is the pump seal. A lot of pump heads cannot hold pressure over a certain level which translates into a lower total max pressure in the air chamber. Another big one is how well the bolt probe is sealed and also the design of the bolt probe. One of the Steroid upgrades is an improved bolt design (not positive if they have one for the Sheridan but they do for their MKI mods) On a design level, the air volume between the rear of the pellet and the exhaust valve is a significant factor. For best performance, it needs to be as small a volume as possible. Another factor is the hardness of the exhaust valve seal: a sticky seal that works great at sealing also lowers performance; for top performance, as hard a seal that still works is best. Another factor is the exhaust valve spring; the weaker this spring the better the performance. Note: all of these tips are from the work done at MAC-1. RebelDawg likes this post1 person likes this post Jan 31, 2019#102019-01-31T01:07:07 Interesting comments. On the subject of the pump seal, I wonder how important the seal cup is. The older model C's do not accommodate the replacement seals very well. The seal needs modification to fit. I don't get the part about air volume behind the pellet.....I always thought more is better. As far as the exhaust valve seal goes, I suspect that the ones readily available from Crosman are too soft to maximize performance. These observations were while resealing my Sheridan. louisvanhovell likes this post1 person likes this post MODEL E SERIES.....\$80.00 Monday - 9:00AM - 5:00PM Tuesday - 9:00AM - 5:00PM Wednesday - 9:00AM - 5:00PM Thursday - 9:00AM - 5:00PM Friday - 9:00AM - 5:00PM Saturday - 9:00AM - 5:00PM Sunday - CLOSED KEEP IN TOUCH Thank you for contacting us. These parts kits fit most multi-pump Sheridan .20 caliber air rifles manufactured since 1995. These models have the removable (non-soldered) valve, starting with the so-called Phase 1 models, manufactured from 1995 to 1997. Generally, if your C9 or CB9 air rifle is fitted with a plastic trigger assembly, our parts kits will fit. Archer Airguns cannot provide telephone or email support to help you fix your gun, even if you decide to use our parts kits. Sorry. SAFETY WARNING! Please do NOT order parts kits if you do not know what you are doing and understand how the gun works. Considerable danger - or even death - can be caused to you and others if you re-assemble the gun incorrectly. Archer Airguns will not be held responsible for any consequences resulting from attempted repairs to airguns. You will be asked to electronically sign a disclaimer before your parts kit order can be accepted.
